CARBON DIOXIDE TRANSMITTERS
CDT-MOD-2000 SERIES

Multifunctional, wall mount CO2 transmitters for building automation systems that use Modbus serial communication protocol

The CDT-MOD-2000 series air quality transmitters are engineered for building automation systems in the HVAC/R industry. The CDT-MOD-2000 series measures carbon dioxide (CO$_2$), utilizing the industry standard NDIR measurement principle, and temperature (T). Optional relative humidity (rH) measurement is also available in the same device. The CDT-MOD-2000 series devices have large touchscreen display making the configuration of the device quick and easy. Configuration is also possible via Modbus network.

The CDT-MOD-2000 series transmitters calibrate themselves automatically using ABC™ logic. The ABC™ logic requires that the space in which the transmitter is used needs to to be unoccupied for four hours per day so that the indoor CO$_2$ concentration drops to the outside level. CDT-MOD-2000-DC is a dual channel model with a measuring channel and a reference channel that makes a continuous comparison and the necessary adjustment accordingly. CDT-MOD-2000-DC is also suitable for buildings that are continuously occupied.

CDT-MOD-2000 series devices include:
- Separate field configurable Modbus output for each measurement parameter (CO$_2$, rH, T)
- Offset feature enabling field calibration for each measurement parameter (CO$_2$, rH, T)
- One analog output for selected measurement: voltage (0/2–10 V) or current (4–20 mA)
- 2" x 3" touchscreen display
- Optional relay output

APPLICATIONS

CDT-MOD-2000 series devices are commonly used to monitor:
- CO$_2$ and humidity levels in offices, public spaces, meeting rooms and classrooms
- CO$_2$ levels of return air in ventilation systems
- incoming air and return air humidity levels in ventilation system
- humidity in various industrial applications
- temperatures in HVAC/R environment
- CDT-MOD-2000-DC series devices can also be used in applications where there is a constant source of carbon dioxide present (for example hospitals and greenhouses)
